New Case Packer with Vision Provides Versatility

The Spider 300v is a two-robot case loading system with vision allowing processors and co-packers to pack both vertical and horizontal on the same line at the same time. This versatile packaging solution allows for random product arrival at high speeds; providing great flexibility in packaging formats. Bulk, variety, display and single flavor packing are all achievable! Built for high speed packing and quick changeover between recipes, the Spider 300v is capable of handling standard RSC cases, three-sided displays and a wide range of other secondary containers.

The Spider 300v features a new standard modular frame designed to reduce cost by minimizing wiring and significantly minimize footprint of the line by eliminating bulky external electrical cabinets.

BPA is a world leader in end-of-line packaging automation. With more than 35 years of experience in consumer goods packaging BPA designs, develops and manufactures packaging solutions for flexible and other tough-to-handle packages.
